Evaluation

Project product evaluation

Good point:

Magazine product is suitable and easy to use for different kind of users. It is flexible as user can switch between tabs with single click. Each user has separated roles, users can comment, make contact with the others via live time-chat. Moreover, interfaces look simple and eye-catching for user to use. Live chatting section is available for students and coordinator.

Improvement:

Security needs to improve as vulnerability can occurred at any time, which can lead to data loss, hackers can sell data to the third-parties.

Team member evaluation

Members:

- **Le Van Trung**

He's is a good leader; however, time-management is not too good to lead our team smoothly. As a product owner, he works with customer and set goals, objective direction for team. He also provides feedback to development team and motivation members to reach their maximum performances.

- **Do Duc Anh**

He working work Hung smoothly when it comes to front-end designing of user interfaces. However, when working work API to upload file, he has been struggling for a short time, also he is distracted easily. Overall, he follows other members and executed perfectly without facing any more problems.

- **Pham Thanh Tung**

He's hard-working on test case. He spent 40 hours just to make sure that our functions working correctly. Although, some functions of test cases were missing but he executed quite well.

- **Vu Manh Hung**

His user interface design is fascinating, easy to use, high flexibility. As a Scrum master, he having experiences on executing Agile practices too complete works that Product Owner prioritizes.

Challenges:

Some challenges have been made when we working with this project. However, we manage to executed. Some members in the team needs to concentrate on group project. We also lack of planning, resistance to make changes and do not have much experiences when working on agile and scrum.

Comment:

Trung needs to have a better vision for the project, also he needs to development team understand task and work on the right features in a specific job priority order, also he needs to be attended for group work more often.

Hung needs to establishing an environment to have effective team and helps team from being distraction.

Tung and Duc Anh need to participate in group meeting more frequently.

Team needs to improve communication, productivity level not high as I expected.

Contribution and Score:

Vu Manh Hung: 10

Le Van Trung: 7

Pham Thanh Tung: 8

Do Duc Anh: 8

Personal evaluation

Challenges:

I have faced several challenges, but the most significantly is to create and maintenance database. I have struggle at using mongoDB because it is my first time using it instead of php MySQL, ... However, I have managed to use it smoothly.

Comment:

I need to manage time and create suitable plan in the future. I have known how to use MongoDB and React JS. Overall, I have learnt about time management and team player is significantly when it come to large project such as Magazine.

Contribution: 8**Score: 7****Conclusion**

There are other problems that we encountered. However, these problems have been successfully overcome. Moreover, planning and time-consuming will not be wasted as we already have experiences about Agile methodologies. Overall, we finally managed the project on time by using Scrum and Agile.
